

## Any Video Converter

- 1) "Drag and drop" the movie/movies to convert
- 2) Select video type: Customized MP4 movie
- 3) In the settings window select size: 640x480 and quality: Low
- 4) If multiple movies should be joined to one single movie, check the sequence order of the movies and activate "join all files"

The screenshot shows the AVC software interface with four numbered callouts:

- 1: Drag and drop movie/movies** points to the 'Media Files' area where two video files, 'Test movie' and 'Test movie 2', are listed.
- 2: Select video output type** points to the dropdown menu at the top right, which is set to 'Customized MP4 Movie (\*.mp4)'.
- 3: Select video output type** points to the 'Basic Settings' panel on the right, where 'Video Size' is set to '640x480' and 'Quality' is set to 'Low (Smaller file size)'. A red dashed box highlights these two settings.
- 4: Select "join all files"** points to the 'Join All Files' checkbox at the bottom of the interface, which is currently checked.
